Thermodflow, Inc.

WHAT IS ELINK?

ELINK is a name derived from "Excel LINK" and is a feature of Thermodflow software that lets you run a model built with any of our core programs (GT PRO, GT MASTER, STEAM PRO, STEAM MASTER, or THERMOFLEX) from inside the MS Excel environment.

➤With **ELINK** you can make batch runs with different design parameters, or different off-design conditions. The inputs to the model are manipulated in Excel using normal Excel cells. Model outputs that you select are displayed in Excel cells that you can use in calculations, plots, or Excel-based reports.

➤With ELINK you can create a **Graphical User Interface**, inside Excel, to run a Thermodflow model you create. This means you can distribute an Excel version of your model, so others can use it without needing to know how to use Thermodflow's software.
